CHEMICAL TANK CONTAINER

WITHOUT BOTTOM DISCHARGE FOR ACIDS TRANSPORTATIONS

UPPER DRAIN DEVICE
Used to drain/pour product into a tank container.
Equipped with a drain tube

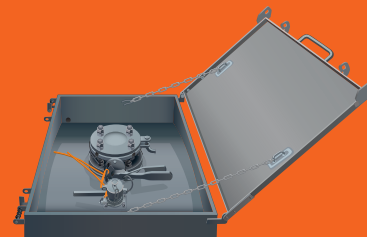

AIR INTAKE VALVE
used to equalize the pressure in the process
of draining/pouring of the product

STEAM HEATING
steam heating system allows to heat the product
before it is drained/ poured in times of cold weather

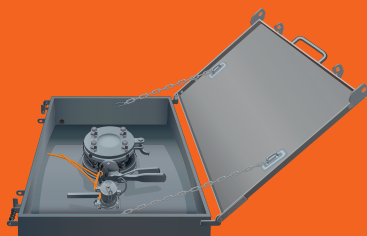

THERMOMETER
Allows to control the temperature of products,
the discharge of which must be carried
out in a strictly defined temperature range

WITH BOTTOM DISCHARGE FOR THE TRANSPORTATION OF PETROCHEMICALS

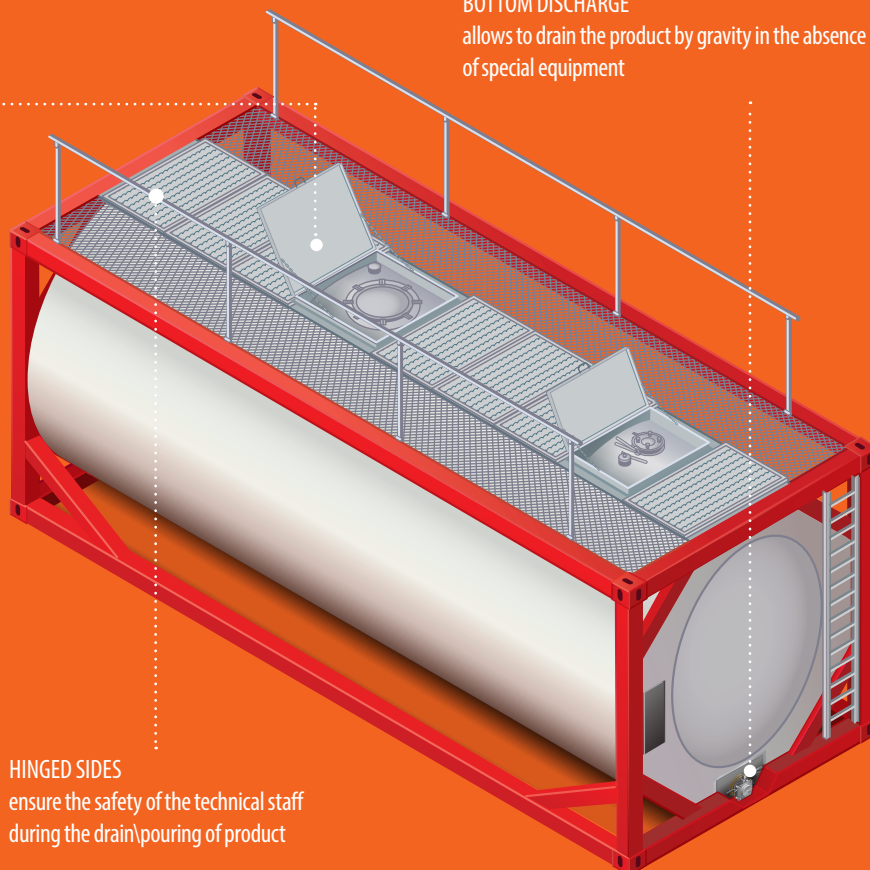

BOTTOM DISCHARGE
allows to drain the product by gravity in the absence
of special equipment

ACCESS HATCH
used to pour products in an open way. Allows quick
unload of the product without the use of special
equipment

PRESSURE RELIEF VALVE
allows to normalize the pressure in the tank container
in case of overpressure during transportation
of the product

HINGED SIDES
ensure the safety of the technical staff
during the drain\pouring of product
